

## Slow Website

Posted by Danqazmlp - 2011/05/17 12:33

---

This concerns every area of the website.

Every single page on the website runs incredibly slow for me. Not in loading, but moving and scrolling. This is the only website I know that this occurs on so is very unlikely to be something my end.

I'm not sure of the reason behind this, maybe too many things are running on the site at once, but it does make me much less likely to play games here as it is frustrating to navigate.

Also to add to this. Many games have part of their applet window cut off. They need to be resizable so that important parts of the game are not cut off.

Maybe you have zoom the page in your browser. Click outside the flash game an try to press CTRL+0 (zero). Let me know.
